# Notes: Chapter 1

Some stuff to refresh my mind.  8 primitive types are int, double, char, boolean, float, long, byte, and short.

Loops are for loop, while loop, and do while loop.

Syntax for inhanced for loop

```
for(int i=0; i<9; i++){

        for(int j=0; j<9; j++){

        }

}
```

Logic operator and = &&, or ||, not !=

Break; so you can break out of while loop

Switch syntax

```
Switch(some)

{
        Case 'a':

        Case 'b':

        Break;
```
